Physics notes on the  
theory of light  
Reflection - refraction

Light is a form of energy  
It travels in straight lines  
Reflection - when light rays hit a surface and bounce back  
Refraction - when light rays change direction as they pass from one medium to another  
Speed of light is  $3 \times 10^8$  m/s  
Total internal reflection - occurs when light travels from a denser medium to a rarer medium at an angle greater than the critical angle  
Dispersion of white light - white light is made up of seven colors  
Spectrum of white light - VIBGYOR  
Scattering of light - shorter wavelength light is scattered more than longer wavelength light  
Rayleigh's scattering law - intensity of scattered light is inversely proportional to the fourth power of wavelength  
Tyndall effect - scattering of light by colloidal particles  
Diffraction of light - bending of light rays around the corners of an obstacle  
Interference of light - combination of two waves in phase to form a wave of greater amplitude  
Polarization of light - vibration of light in a particular direction  
Double slit experiment - demonstrates wave nature of light  
Photoelectric effect - emission of electrons from a metal surface when light of sufficient frequency is incident on it  
Wave theory of light - explains reflection, refraction, diffraction, interference  
Particle theory of light - explains photoelectric effect, Compton effect

Dear Harvey:

On behalf of Pastor Fair, the Church Council, congregation and surrounding neighborhood I wish to convey to you our thanks and appreciation for your time and effort and success in repairing our church clock.

It is certainly beneficial to United to have such a knowledgeable person as a member of our going church family.

Again, we say thank you.

Yours very truly,

William Voelker  
President  
Church Council
